Worksheet 3: OS & Sebek installation

03.11.2009, Garching

Due 10.11.2009

1 Honeypot configuration overview (lab task)

Give the group a short overview of your planned OS and services along with a short description of vulnerable parts in your setup.

2 OS installation (homework)

Install your chosen operating system on your honeypot.

3 Sebek installation (homework)

Install Sebek on your honeypot. Make sure the network is still running and confirm that Sebek can be launched. Use port 6969 in your Sebek configuration. You can use tcpdump on your honeypot machine to confirm that Sebek packets are being sent.
