What this seminar is about?

- Modern Software consists out many software components
What this seminar is about?

- Modern Sofware consists out many software components
- This software components can contain easily contain about 100.000 lines of code
  - e.g. OpenSSL has about 230000 LOC
  - the linux kernel even has about 21 million LOC
What this seminar is about?

- Modern Software consists out many software components
- This software components can contain easily contain about 100,000 lines of code
  - e.g. OpenSSL has about 230,000 LOC
  - the Linux kernel even has about 21 million LOC

- Is this secure?
Examples where it was not...

Apple Goto Fail

Do you remember other accidents?
An overview of automated software analysis techniques:

- Static code analysis
  - Dataflow analysis
  - Abstract interpretation
  - RegEx search for secret values
- Dynamic code analysis
  - Code Sanitizer (z.B. AddressSanitizer von Clang)
  - Fuzzing
  - Symbolic Execution
  - Binary Instrumentation
Course Organization

We will organize the seminar like a scientific conference. You will present your research in written and in a presentation to your peers.

The paper you will be writing will (most likely) be a *Systematization of Knowledge (SoK)* or *introductory* paper.

SoK papers do not propose a novel approach. They take a broader view on a topic, explain the core concepts and put the most relevant works in context. Introductory papers explain the core concepts of a field, the problems they are applied to and ongoing research directions.
Course Organization

- **Research & Paper Writing**
  - Write a scientific paper of (exactly) 10 pages (excluding references and appendices)
  - We will use the standard Usenix Security \LaTeX\ template

- **Review Phase**
  - Every participant creates 2-3 reviews of her/his peers
  - ~1 page review

- **“Camera Ready” Phase**
  - Integrate the reviewers’ remarks, improve your paper as far as possible
  - Submit the “camera ready” version (final polished version)

- **Presentation**
  - 30 minutes presentation
  - 15 minutes discussion

- **Language: English**

</table>
Requirements

“First version” Structure & main contents of the paper are fix. Introduction, conclusion, abstract might not be fully finished. Language does not have to be perfect, graphics might not be finished, some references might be missing. Focus on the “meat” of the paper!

“Draft” Paper should be mostly finished apart from small details.

“Review” Provide constructive feedback on your fellows’ papers.

“Camera Ready” The perfect and final version of your paper that you and your reviewers will be happy with. Correct formatting, correct citations, no typos.
The grading is composed of *mandatory* and *graded* parts:

**Mandatory:**
1. Timely submission of paper, reviews, final paper
2. Meetings with advisor
3. Reviews

**Graded:**
1. Paper (50%)
2. Experiments (10%)
3. Presentation + Discussion (30% + 10%)
Location

- In this room: 01.08.033
- 10 Slots
  ⇒ Send a letter of motivation to kilger@sec.in.tum.de until 14.02.2023
- Register in the matching system
- Register for this seminar until 15.02.2023.
Letter of Motivation

Tell us about:

- Why are you interested in this seminar?
- What areas of Software Security Analysis interest you?
- Optional: Your previous experience with SSA-related topics
Q&A
