Binary Exploitation I — Winter 2023/24 Practical Course

Fabian Kilger Julian Kirsch & Clemens Jonischkeit

Chair of IT Security / I20 Prof. Dr. Claudia Eckert Technische Universität München

2023-07-11

What is this?

Exploiting buggy C programs on modern x86_64 Linux systems.

What is this?

Exploiting buggy C programs¹ on modern x86_64 Linux systems.

¹Disclaimer: There might be a little C++ as well...

Exploiting buggy C programs¹ on modern $x86_{64^2}$ Linux systems.

¹Disclaimer: There might be a little C++ as well... ²Disclaimer: There might be a little 32-bit x86 as well... What is this?

Exploiting buggy C programs¹ on modern x86_64² Linux³ systems.

¹Disclaimer: There might be a little C++ as well...

²Disclaimer: There might be a little 32-bit x86 as well...

³Just kidding — no Windows (yet). We kindly refer you to abx. ③

You should...

...understand how computers work

- ...know the basics of the Intel x86 assembly language
- …have a reasonable grasp of the C programming language

...but most importantly:

You should...

…understand how computers work

- ...know the basics of the Intel x86 assembly language
- …have a reasonable grasp of the C programming language

...but most importantly:

...enjoy banging your head against tough challenges

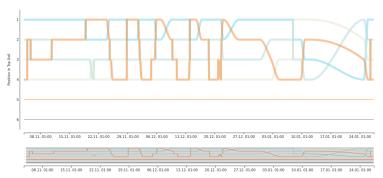

Phase I (\sim 10 weeks):

► "Usual" practical course (weekly meetings and assignments)
Phase II (~ 4 weeks):

► Final project (vulnerable program, exploit and presentation)

🔀 Graphs

Process — Phase I

Teams of two

Every week: Introduction to a new topic

- Submission of solutions before the following week's meeting
- Presentation of the solution during that meeting

Final project

- Development of a vulnerable application
- Creation of an exploit (ab)using the vulnerability/ies
- Presentation (about 20 minutes)
- ► Hack the other teams' applications ☺
- ► Create Write-Up(s) about other teams' applications
- Details follow when the time has come

Contents

- Analysis and debugging tools
- ► Hijacking the control flow
- Shellcode
- Format string vulnerabilities
- Stack- and heap-based buffer overflows
- Exploiting heap management logic
- Bypassing protection mechanisms

Don't say we didn't warn you

- Assume up to 30h of workload per week
- (But: You reach state-of-the-art uber 1337 h4x0r skillz knowledge about binary exploitation techniques on Linux systems)

Time and place

When? Wednesday, 14:00 Where? TBA

Registration

- Solve our qualification challenge individually!
- Available at:

honeynet.sec.in.tum.de:47331

- Registration honeynet.sec.in.tum.de/bx
- Deadline: 2023-07-24 (23:59 pm)
- Registration using the matching system (formally required)
- ► 20 slots
